Education

B.Tech in Information Technology — Dwarkadas J. Sanghvi College of Engineering **2025–2028**

- *GPA: 9.02*

Diploma in Computer Engineering — Bhagubhai Mafatlal Polytechnic & College of Engineering **2022–2025**

- *GPA: 9.54*

Technical Skills

Languages: C++, JavaScript, Python, SQL
Frontend: React.js, Next.js, Electron, HTML5, CSS3
Backend: Node.js, Express.js, FastAPI, REST APIs, JWT
Databases: MongoDB, MySQL, SQLite, Firebase Firestore
Tools: Git, GitHub, Docker, Postman, Firebase, Vercel, Render

Experience

Frontend Engineer Intern — Techsphere **May 2024 – Jun 2024**

- Integrated **REST APIs into the Finpedia website**, connecting frontend components with backend services to fetch and dynamically render data.
- Contributed to the development of the **Techsphere portfolio website** and independently converted a **Figma design into a responsive React interface**, translating design specifications into reusable frontend components.

Projects

IntelliFile — **AI-Powered Desktop Search Engine** [Link](#) **2026**

- Built an offline, privacy-first file intelligence platform combining **AI-powered semantic search, smart file categorization, document versioning and format-aware diffing, secure vault/file locking, and cross-device synchronization** for managing heterogeneous local files.
- Developed the **AI-powered indexing and search pipeline**, integrating **OCR and image understanding, document extraction and chunking, BGE-small-en-v1.5 embeddings, FAISS vector search, and SQLite FTS5/BM25 retrieval** for privacy-preserving search across documents and images.

ClassConnect — **Adaptive Learning Platform** [Link](#) **2026**

- Developed a cross-platform ed-tech platform for **Project-Based Learning (PBL)**, enabling teachers to create structured mini-projects, manage classes, monitor submissions, and track student progress in real time.
- Implemented **Flutter-based student and teacher workflows** with **Firebase Authentication and Cloud Firestore**, supporting role-based access, real-time progress tracking, project submissions, and secure student-specific data management.

HealthHub — **Healthcare Management System** [Link](#) **2025**

- Developed a unified **AI-powered healthcare platform** offering **symptom-based disease prediction, doctor discovery and telemedicine, medical record management, medicine assistance, and emergency services** through a cross-platform mobile application.
- Engineered AI and secure healthcare workflows using **ensemble ML models (Random Forest, SVM, Naive Bayes)**, **FastAPI**, and **Firebase**, with **IPFS-based medical record storage, SHA-256 hashing, and time-limited sharing** for controlled doctor-patient data access.

Achievements

- **1× State-Level Hackathon Winner.**
- **2× Intra-collegiate Coding Competition Winner.**
- Solved **500+ DSA problems** on LeetCode; **1100 Codeforces** rating; **2 star CodeChef** rating.
- Conducted a **hands-on session on Git and GitHub**, covering version control and collaborative development.
- Participated in **8+ hackathons and competitive coding events.**

Co-curricular Activities

Tech Team — **Google Developer Groups DJSCE** **Dec 2025 – Mar 2026**

- Developed **React dashboards and event platforms** with responsive, reusable UI components.
- Implemented **data management interfaces and interactive frontend workflows** for community and event applications.
